</h1>
<h3>
                  According to the World Health Organization (WHO),
cardiovascular diseases (CVDs) are the number one
cause of death
         today. Over 17.7 million people died from CVDs in the year
2017 all over the world which is about
31% of all deaths, and
         over 75% of these deaths occur in low and middle-income
countries. Arrhythmia is a representative
type of CVD that
```

refers to any irregular change from the normal heart rhythms. There are several types of arrhythmia including atrial

fibrillation, premature contraction, ventricular fibrillation, and tachycardia. Although a single arrhythmia heartbeat

may not have a serious impact on life, continuous arrhythmia beats can result in fatal circumstances.

Left Bundle Branch

A delay blockage of electrical impulses to the left of the heart. Left bundle brach block sometimes makes it harder for the heart to pump blood efficiently through the circulatory system.

Most people don't have symptoms. If symtoms occur, they inlcude fainting or a slow heart rate.

If there's an underlying condition, such as heart disease, that condition needs treatment. In patients with heart failure, a pacemaker can also relieve symptoms as well as prevent death.

Prediction</span>
</h1>
<h3>
                In this project, we build an effective electrocardiogram (ECG)
arrhythmia classification method
using a convolutional
                    neural network (CNN), in which we classify ECG into seven
categories, one being normal and the other
six being different
        types of arrhythmia using deep two-dimensional CNN with grayscale
ECG images. We are creating a web
application where
        the user selects the image which is to be classified. The image is fed
into the model that is
trained and the cited
class will be displayed on the webpage.
